Chondroitin and Glucosamine for correct articular development

Studies have shown that the supply of glucosamine and chondroitin promotes healthy joints and a healthy skeletal system. The use of glucosamine and chondroitin helps prevent the onset of articular physiology complications, preserving the surface layer of cartilage.

Also for pregnant and nursing females

During pregnancy and lactation, mothers require a higher amount of energy to guarantee their wellbeing and that of the soon-to-be-born or newborn puppy. A Puppy&Junior food, rich in nutritional elements, is ideal for their daily diet, helping them during this important period of their life.

Rich in Omega-3 and Omega-6 younger skin

A shiny and healthy coat is not only an aesthetic factor. The haircoat performs numerous functions, including thermal insulation and protection from the harmful rays of the sun and of atmospheric agents. A correct supply of Omega-3 and Omega-6 essential fatty acids is important for the coat to preserve its characteristics.
